

Designing Components With Figma

Let's build on our foundational knowledge of design and
create a button and a modal component.

Types of buttons

Button styles

Your buttons should look and function like buttons.

Submit

Solid buttons

Solid buttons are buttons with a solid background fill.

They're easily recognizable and a great choice for a primary button.

Submit

Delete

Confirm

Submit

Ghost buttons

Ghost buttons are buttons without a background fill; they only have an outline.

Icon buttons

Icon buttons have no label and are only an icon.

Keep in mind that buttons and icons without a label are bad for accessibility and if a label can be used it should.

Button styles

Border radius

Rounded buttons are more playful than buttons with squared edges.

Your button design should coincide with your brand identity.

Drop shadow

Drop shadows give your buttons elevation.

You can add drop shadows on hover and focus states to indicate state change.

Labels

When choosing your label style, be sure you place readability above all else.

Vertical padding

You must ensure your buttons are large enough to be accessible and clickable on a mobile device.

Small

Default

Large

Horizontal padding

To keep your buttons responsive, you can add horizontal padding.

Button values

Use the following values for your button components.

Warning: #fddb3a (black text)
Error: #fa4d56 (black text)
Success: #6fdc8c (black text)

Large button vertical padding: 16px
Default button vertical padding: 8px
Small button vertical padding: 8px

Large button horizontal padding: 24px
Default button horizontal padding: 12px
Small button horizontal padding: 8px

Large button minimum width: 125px
Default button minimum width: 100px
Small button minimum width: 75px

Large button icon size: 24 x 24
Default button icon size: 16 x 16
Small button icon size: 8 x 8

8px padding right between the icon and the button text
